Metrics Specification

1. Purpose

The analytics component will help users understand deviation patterns and monitor the current state of deviations.

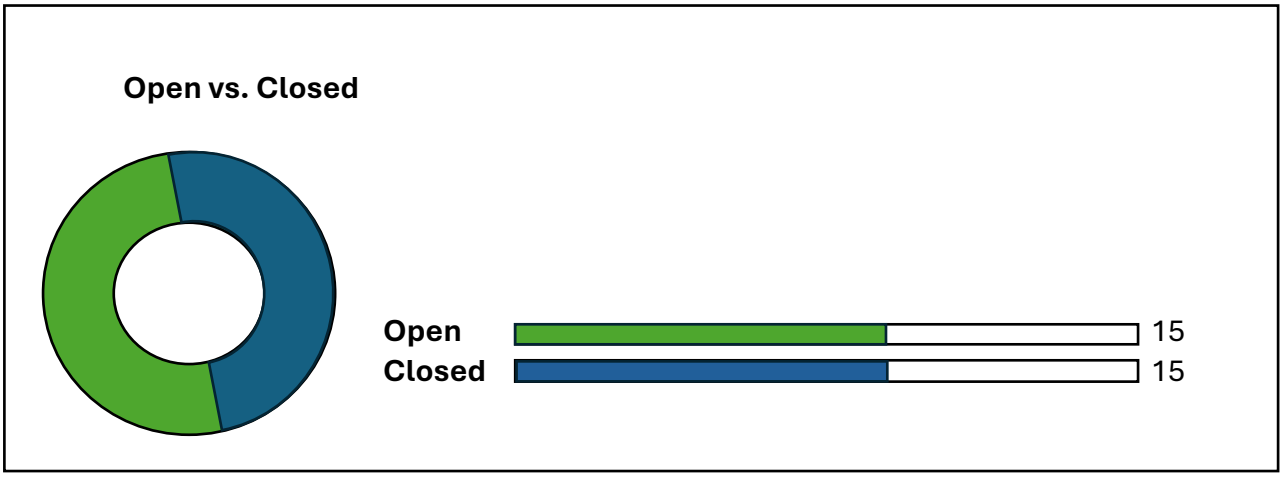

2. Required Analytics

Deviations by Type (*In Analytics screen*)

- Calculation: Count deviations grouped by type.
- Required fields: Deviation ID and type.
- Proposed visualization: Horizontal Bar chart.
- Goal: Identify the most frequent deviation categories.

Open vs. Closed (*Optional in Analytics and Dashboard screen*)

- Calculation: Count deviations with Open and Closed statuses.
- Required fields: Deviation ID and status.
- Proposed visualization: Bar chart or summary cards.
- Goal: Compare unresolved and closed deviations.
- Note: In Progress deviations will be displayed separately.

3. Other Metrics

Metric	Calculation	Required fields
Total deviations	Count all unique deviation IDs	deviation_id
In Progress	Count records with status In Progress	status
Assigned deviations	Count deviations assigned to a user	assigned_user
Overdue deviations	Not Closed, with deadline before today	status, deadline
Deviations over time	Count deviations grouped by creation date or month	created_at
Deviations by severity	Count deviations grouped by severity	severity

4. Data Requirements

The analytics component requires unique deviation IDs, status, type, and—where applicable—assigned user, deadline, creation date, and severity.
